(http://javatutorialcorner.com/java/read-utf-8-xml-file-using-sax-parser/#respond)

In this tutorial we are going to see how to read XML file with UTF-8 character using SAX parser.

- 1. Create Project Called JavaXML
- 2. Create package called com.javatutorialscorner.xml.sax under JavaXML.
- 3. Create Java class called ReadUTF8XMLFile.java under com.javatutorialscorner.xml.sax package.

ReadUTF8XMLFile.java

1 de 7 22/06/16 17:57

```
import java.io.File;
    import java.io.FileInputStream;
    import java.io.IOException;
    import java.io.InputStream;
    import java.io.InputStreamReader;
    import java.io.Reader;
    import javax.xml.parsers.ParserConfigurationException;
    import javax.xml.parsers.SAXParser;
    import javax.xml.parsers.SAXParserFactory;
    import org.xml.sax.Attributes;
    import org.xml.sax.InputSource;
    import org.xml.sax.SAXException;
    import org.xml.sax.helpers.DefaultHandler;
    public class ReadUTF8XMLFile {
     /**
      * @param args
     public static void main(String[] args) {
     // TODO Auto-generated method stub
       SAXParserFactory saxParserFactory = SAXParserFactory.newInstance();
       SAXParser parser = saxParserFactory.newSAXParser();
       DefaultHandler defaultHandler = new DefaultHandler() {
        boolean firstName = false;
        boolean lastName = false;
        boolean petName = false;
        public void startElement(String uri, String localName,
          String qName, Attributes attribute) throws SAXException {
         System.out.println("Start Element : " + qName);
         if (qName.equalsIgnoreCase("FIRSTNAME")) {
         firstName = true;
         if (qName.equalsIgnoreCase("LASTNAME")) {
         lastName = true;
         if (qName.equalsIgnoreCase("PETNAME")) {
          petName = true;
         }
        }
        public void endElement(String uri, String localName,
          String qName) throws SAXException {
         System.out.println("End Element : " + qName);
        public void characters(char ch[], int start, int length)
         throws SAXException {
         if (firstName) {
          System.out.println("First Name : "
            + new String(ch, start, length));
          firstName = false;
         if (lastName) {
          System.out.println("Last Name : "
            + new String(ch, start, length));
          lastName = false;
         if (petName) {
          System.out.println("Pet Name : "
           + new String(ch, start, length));
          petName = false;
        }
        }
       };
       File xmlFile = new File("C:\jtc\student.xml");
2 de 7 InputStream inputStream = new FileInputStream(xmlFile);
```

```
Read UPPAderXinderie using SAXS became adder(inputStream, "UTF-8");
InputSource inputSource = new InputSource(reader);
parser.parse(inputSource, defaultHandler);
} catch (ParserConfigurationException e) {
// TODO Auto-generated catch block
e.printStackTrace();
} catch (SAXException e) {
// TODO Auto-generated catch block
e.printStackTrace();
} catch (IOException e) {
// TODO Auto-generated catch block
e.printStackTrace();
} catch (IOException e) {
// TODO Auto-generated catch block
e.printStackTrace();
}
}
```

If you parse XML file that contains UTF character that throws error. So avoid this error convert xml to UTF-8 InputStream by using following lines of code.

```
File xmlFile = new File("C:\jtc\student.xml");
    InputStream inputStream = new FileInputStream(xmlFile);
    Reader reader = new InputStreamReader(inputStream, "UTF-8");
    InputSource inputSource = new InputSource(reader);
    parser.parse(inputSource, defaultHandler);
```

student.xml

```
<?xml version="1.0" encoding="UTF-8" standalone="no"?>
<college>
<student>
<firstname>Shiva</firstname>
<lastname>J</lastname>
<petname>§</petname>
</student>
</college>
```

Now you can run the program see the following output in console

Start Element : student
Start Element : firstname
First Name : Shiva
End Element : firstname
Start Element : lastname
Last Name : J
End Element : lastname
Start Element : petname
Pet Name : §
End Element : petname
End Element : student
End Element : student
End Element : college
